

# SPECTROCAT

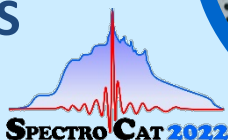

CAEN, FRANCE 27<sup>th</sup> June – 1<sup>st</sup> July

Summer School on vibrational spectroscopy applied to catalysis & adsorption

The school will consist in various courses about vibrational spectroscopy, from general principles to specialised lectures on *in situ* and *operando* infrared techniques: including cells and apparatus, multi-technique couplings, reactor dynamics & kinetic data collection, data processing and analysis, R&D applications...

The school will be also completed by practical training sessions on *in situ* and *operando* experiments using state-of-the-art equipments and systems of the LCS laboratory

2022
